Loss ratio

- The loss ratio does not include the discounting effect in the curve's movement, which is recorded in OCI, -(€1.0) million at September 2024, -(€1.5) million at September 2023
- We include expenses attributable to claims in the loss ratio, as under IFRS 4
- Losses on onerous contracts reflect the release (allowance) in Health insurance during the year. The calculation under IFRS 17 takes only one financial year into account (two under IFRS 4), although the concept is similar to the provision for unexpired risks. There were no changes during the quarter. The recoverable component of reinsurance reflects the ceded portion

Expense ratio

- Investment management expenses are now recognised in the expense ratio (they used to be part of the financial result under IFRS 4)
- Under local standards, the change in the provision for claims settlement agreements when the policyholder is innocent was recorded under expenses (as they constitute settlement agreements between parties and are regulated accordingly by the Spanish Directorate General for Insurance and Pension Funds). Under IFRS 17, they are now included in the loss ratio
- In addition, the profit sharing of the "Other" segment (from travel insurance to cardholders) is now included in the loss ratio
